

JUVEN® NUTRITION & WOUND CARE PATHWAY

Which type of wound(s) does the resident have?

It is a newly occurring wound or a wound of partial thickness. Implement general nutrition support • Diet liberalization per approval from HCP • Verbal cueing and praise for good intake • Supply calorie-dense fortified foods · Add snacks between meals (ie, oral nutritional supplements) • Additional protein supplementation (unless contraindicated by medical condition) Has wound healing improved? Yes Evaluate if additional nutrition is needed and consider moving patient to Continue plan of care wound-specific nutrition support

There are multiple wounds, or a chronic, nonhealing, full-thickness wound.

Implement wound-specific nutrition support

- Continue general nutrition support
- Add Juven: 2 packets per day

Continue wound-specific nutrition support until the wound is healed

Recommend Juven 2x per day to support wound healing.

Juven should be used under medical supervision in addition to a complete, balanced diet. Information provided to demonstrate how Abbott Nutrition products can fit within a nutrition plan; recommendations are at the discretion of the health care professional.
